

PowerTab — Feature Roadmap

Vision: An AI-powered, free-form spatial browser extension that replaces rigid note lists with an infinite digital canvas.

● Layer 1 — MVP (Build This First)

Goal: Ek working, usable product jisko real users try kar sakein. No AI, no complexity — sirf core canvas experience.

1.1 🖼️ Free-Form Spatial Canvas

- Infinite drag-and-drop workspace (no grid, no columns)
- Notes freely movable anywhere on screen
- (x, y) coordinate persistence — layout saves on refresh
- Smooth drag interactions with mouse + touch support

1.2 📝 Basic Note Card

- Create / Edit / Delete text notes
- Single note type (plain text only at this stage)
- Clean minimal card UI with a title + body
- Auto word-wrap for long content inside card boundaries

1.3 🏠 Tab Navigation Bar

- Persistent top nav: **NOTES** | **FLOW** | **REMEMBER**
- Smooth tab switching (no page reload)
- Active tab indicator

1.4 💾 Local Storage Persistence

- All notes saved in **IndexedDB** (offline-first)
- No server, no login, no account needed
- Data survives browser restart

1.5 🎨 Canvas Zones (Basic)

- Ability to create colored background regions
- Drag notes freely inside/outside zones
- 4–5 preset zone colors (Work, Personal, Ideas, etc.)

1.6 🖱️ Hover-Triggered Action Dock

- Action buttons (Delete, Edit, Copy) hidden by default
- Smoothly fade in on card hover
- Clean, minimal UI — no clutter when not in use

● Layer 2 — Intermediate (Ship After MVP is Stable)

Goal: Extend the canvas into a real thinking tool. Add note types, flow mapping, and basic AI features.

2.1 📁 Note Types System

- **Text Note** — plain text (already in MVP)
- **Link Card** — auto-fetches URL favicon + page title
- **Code Block** — syntax highlighting support
- **Image Drop Zone** — drag & drop image directly onto canvas

2.2 🔄 Flow Mapping System

- Switch to **FLOW** tab to enter graph mode
- Draw visual lines (edges) between note cards
- Notes become nodes in a connected mind-map
- Basic directional arrows on edges

2.3 🔗 Bi-Directional Linking

- Type `[[Note Title]]` inside any note
- Auto-creates a visual edge in Flow view
- Clicking the link jumps to the connected note

2.4 🗨️ Context-Aware Page Scraper

- On **NOTES** tab, auto-detects active browser tab's URL + title
- One-click to capture page metadata into a new note card
- Option to generate a bulleted summary of the current page

2.5 🎯 Focus Mode

- Spotlight a selected note or zone
- Rest of the canvas dims/blurs in the background
- Keyboard shortcut to toggle (e.g. **F** key)

2.6 🔍 Basic Search Panel (**REMEMBER** tab)

- Full-text search across all notes on the canvas
- Results highlight matching cards and center the view on them
- Search history (last 5 queries)

● Layer 3 — Bonus / Advanced (Future Vision)

Goal: Make PowerTab genuinely intelligent. These features set it apart from every other tool in the market.

3.1 🤖 AI Auto-Dock (Semantic Clustering)

- Analyzes all notes using text embeddings
- Automatically moves related cards close together

- Creates visual topic clusters on the canvas
- One-click "Auto-Organize" button

3.2 🗨️ "Ask My Board" — Conversational AI

- AI sidebar chat powered by semantic search (RAG)
- Query your own canvas: *"Show me the GitHub snippet I saved"*
- Understands context across all notes — not just keyword matching
- Maintains conversation history per session

3.3 ✨ AI Sparkle Actions (Per-Note)

- Small ✨ button on each note card header
- Inline AI options:
 - Fix grammar
 - Summarize into bullet points
 - Explain code snippet
 - Convert to action checklist
- Powered by Claude API (Sonnet model)

3.4 📷 Time Capsule Snapshots

- Save canvas state as a named snapshot (like Git commits)
- Browse and restore previous versions of the board
- *"What did my board look like 3 days ago?"*
- Stored locally in IndexedDB

3.5 🌐 Share a Snapshot

- Export canvas as a **read-only public link**
- Like Figma's share mode — view only, no editing
- Optional: password-protect the shared link
- No account required to view

3.6 🧩 Browser Context Integration

- Extension auto-detects highlighted text on any page
- Right-click → "Save to PowerTab Canvas"
- Creates a new note card with source URL attached
- Preserves reading context (page title, section)

📊 Summary Table

Feature	Layer	Priority
Free-Form Canvas + Drag	MVP 🟢	P0
Local Storage (IndexedDB)	MVP 🟢	P0

Feature	Layer	Priority
Basic Note Cards	MVP 	P0
Hover Action Dock	MVP 	P1
Canvas Zones	MVP 	P1
Tab Navigation	MVP 	P1
Note Types (Link, Code, Image)	Intermediate 	P2
Flow Mapping (Mind Map)	Intermediate 	P2
Bi-Directional Linking	Intermediate 	P2
Page Scraper	Intermediate 	P2
Focus Mode	Intermediate 	P3
Search Panel	Intermediate 	P3
AI Semantic Clustering	Bonus 	P4
Ask My Board (RAG Chat)	Bonus 	P4
AI Sparkle Actions	Bonus 	P4
Time Capsule Snapshots	Bonus 	P5
Share a Snapshot	Bonus 	P5
Browser Context Integration	Bonus 	P5

💡 **Build Order Tip:** MVP → Get 10 real users → Intermediate → Ship Flow Mapping → Layer 3 AI features last. AI bina bhi ye tool already useful hona chahiye — tab AI use karna magic lagega.
